LinkedIn: Kodipunjula Charan Raj | GitHub: Charanroyal418 | HackerRank: K.Charan Raj | LeetCode: Charanroyal

PROFESSIONAL SUMMARY

Motivated Computer Science graduate with strong knowledge of Java, Python, Data Structures and Algorithms, DBMS, and Web Development. Skilled in building full-stack applications and solving real-world problems through technology. Seeking a Software Developer role to leverage technical expertise, contribute to organizational success, and continuously enhance professional skills.

EDUCATION

B.Tech — Computer Science Engineering <i>Dr. M.G.R. Educational and Research Institute, Chennai</i>	2023 – 2027 CGPA: 8.26 / 10
Intermediate (Class XII) — MPC <i>Sri Vivekananda Junior College, Chittoor</i>	2021 – 2023 Percentage: 72%
Secondary School (Class X) <i>Keshava Reddy School</i>	2021 Percentage: 98%

TECHNICAL SKILLS

Programming Languages: Java, Python, PHP, C++, JavaScript
Web Technologies: React.js, Node.js, HTML5, CSS3, Bootstrap, Responsive Web Design
Mobile Development: Flutter, Firebase
Database: MySQL, SQL, CRUD Operations, Session Management
Core CS Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems
Tools & Platforms: Git, GitHub, VS Code, HackerRank, LeetCode

PROJECTS

Intelligent Prediction of Flood Disaster Risk Levels Based on Knowledge Graph and Graph Dynamic Neural Networks | Python · TensorFlow · Keras · Pandas · NumPy · Scikit-learn · Matplotlib/Seaborn · Kaggle Dataset · Google Colab | 2025

- Proposed an end-to-end flood disaster risk prediction framework combining a dynamic knowledge graph with a Deep/Temporal Graph Neural Network built in TensorFlow and Keras, achieving 90% accuracy in flood risk level prediction.
- Sourced and prepared a historical flood dataset from Kaggle, using Pandas and NumPy for data cleaning, preprocessing, and feature engineering ahead of model training.
- Applied Scikit-learn for train-test splitting, feature scaling, and model evaluation, and used Matplotlib/Seaborn to visualize feature relationships and flood risk trends.
- Constructed a dynamic knowledge graph modeling evolving spatial-temporal relationships between rainfall, river levels, terrain, and infrastructure, then applied temporal graph-based analysis to classify flood risk levels over time.
- Developed and trained the model in Google Colab/Jupyter Notebook, and built an explainable prediction layer plus an early warning generation module to deliver timely, actionable flood risk alerts.

Engineering Job Portal System | PHP · MySQL · HTML · CSS · JavaScript · Bootstrap | 2025

- Built a full-stack job portal connecting job seekers and recruiters, demonstrating end-to-end ownership of a real-world, multi-user web application from database design to front-end delivery.
- Developed secure authentication and role-based access control (RBAC) for candidates, recruiters, and admins, applying industry-standard security practices suitable for production environments.
- Implemented resume upload, application tracking, and job management features, replicating core functionality found in enterprise-grade HR platforms like Naukri and LinkedIn.
- Designed and managed a normalized MySQL database with full CRUD operations and session management, handling multi-role data integrity across the entire application lifecycle.
- Created an admin dashboard to manage users, jobs, and applications, and integrated job search, filtering, and email notification functionality.

CERTIFICATES

- Java (Basic & Intermediate) — HackerRank, SoloLearn
- Problem Solving — HackerRank
- Python (Basic) — SoloLearn

ACHIEVEMENTS

- Ranked 1st in Instop Coding Course among all participants.
- Secured 2nd Place in Inter-College Mathematics Competition.
- Recognized for Excellence in Problem Solving and Logical Thinking (3rd Place).
- Active competitive programmer — consistently solving DSA challenges in Java and Python on HackerRank and LeetCode.
